

Precision-Flo™

Crossflow Nozzles

The Midwest Cooling Towers, Inc. Precision-Flo water distribution nozzle is a non-clogging nozzle designed specifically for all crossflow cooling tower applications. It provides excellent flow characteristics utilizing a one piece design with single support distribution plate. This produces a uniform distribution pattern helping to enhance the cooling tower's thermal performance.

A unique color coding system allows for easy identification of the correct orifice size. Available orifice sizes range from .625" to 1.375".

The MCT Precision-Flo crossflow nozzle is easily installed and can be easily removed for cleaning or replacement.

The nozzle is manufactured of inert high strength injection molded polypropylene for outstanding corrosion resistance and strength.
