

Spectra Drift Eliminators are now available from Midwest Cooling Towers. Also available is a new FRP support tray specifically designed for use with the Spectra Drift Eliminators in Crossflow cooling tower applications. When used in conjunction with MCT FRP support tray, the Spectra DE's provide a high performance package which increases drift removal while minimizing pressure drop.

Advantages of the Spectra Blade:

- Can be pressure washed without damage
- Lightweight PVC double-wall construction
- Longer spans compared to modular DE's
- Great for dirty water applications
- Glue free easy installation
- Long operating life
- Drift rate 0.003%
- Lower fire risk

Midwest's new FRP tray system provides exceptional durability with superior strength compared to plastic tray systems. This pultruded FRP DE tray maintains a minimum 1/8" thickness, providing the necessary strength for longer spans and higher deposit loads.
